Whether at home or in company premises: energy can be saved with needs-based lighting. This is exactly what our new generation of devices, motion and presence detection, can combine in one device. The new detectors are small and have a long life. And they are quickly assembled and adjusted.

PIR motion and presence detectors

More capabilities, less consumption

Hager's new generation of floating and surface-mounted sensors combine motion and presence detection in one device.

Description	Pack qty.	Art No.
Movement detector 360° surface mounted	1	EE804A
Movement detector 360° flush mounted	1	EE805A

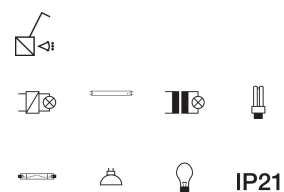

Indoor motion detectors are made for automatic control of lighting in both the residential and industry sectors. They automatically switch on lighting in case a person in movement is detected and light is needed, then turn off the light after a preset duration.

Presence detectors have a high sensitivity to detect the smallest movements in the room. They thus allow significant energy savings in places where the user is in a quasi-static position such as offices, waiting rooms, etc.
